

TIER-RACK[®]

**Flexible Material
Handling Systems**

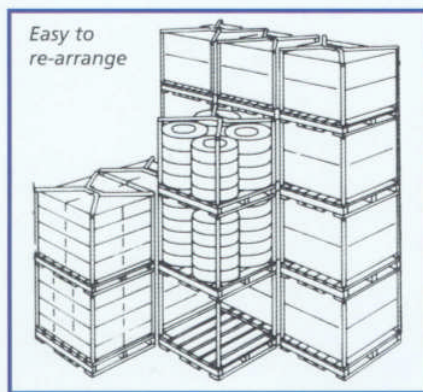

Since 1955, TIER-RACK CORPORATION has been leading the way with innovative racking systems custom designed to improve productivity, increase efficiency and maximize profits. Our LOAD-NESTER racking systems are fabricated with solid welded tubular steel, offering you a wide variety of sizes, designs, and weight capacities. TIER-RACK has the solution for your handling, shipping, and storage needs.

Flexibility: Locate your products anywhere in your warehouse without extra expense or set-up time. Our racks give you the freedom to reorganize your warehouse and maximize your storage space to meet seasonal or market changes without major interruptions to your normal operation.

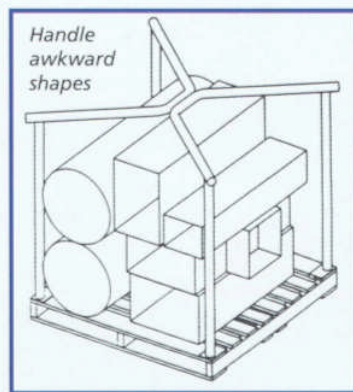

Capacity: Our racks allow bulk storage of merchandise while providing easy access. Our systems allow you to utilize space in your facility where conventional pallet racking is impractical. You save valuable floor space for additional production or storage.

Efficiency: Gain the ability to stack multiple loads at the same time while feeding or collecting materials from assembly lines. Our racks are ideal storage for work-in-process as well as finished product. They also provide one of the most efficient means of handling transfers of product in process between plants.

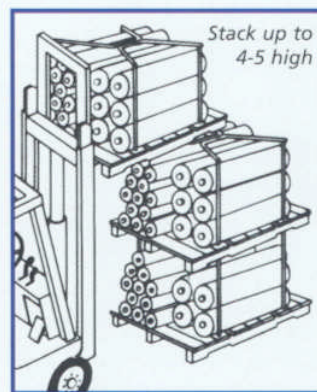

Protection: Eliminate the risk of damage to your materials and finished products. Our racks prevent crushing and may be configured to provide side containment where necessary.

Tire storage

Peak inventory

Stacked empty racks

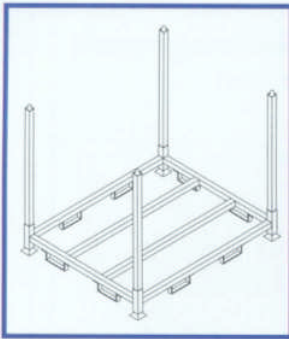

Midwestern Manufacturer:
"...The benefit to us is their ability to 'compress' during the periods we don't use them."

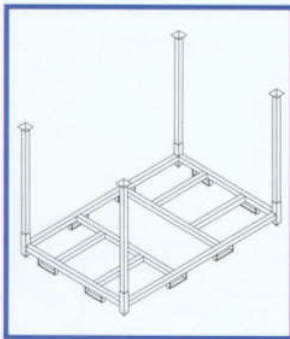

The Load Nester® **All-Steel Portable Racking Models**

Model LN-3

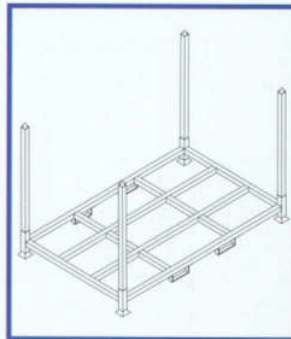

Four-way entry

Removable posts / bases stackable

Top targets

Bottom targets

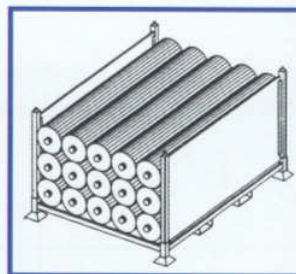

Bulk bag storage

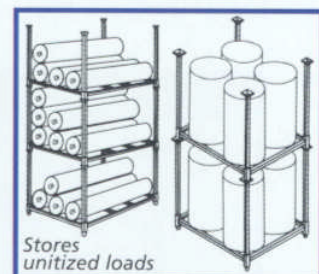

Hard to store rolls

Stack tires 4-5 high

Tire storage

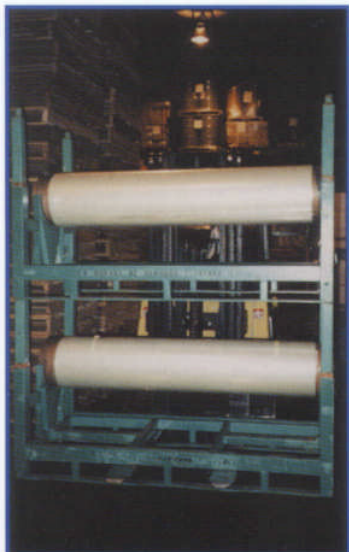

Custom Equipment

TIER-RACK offers custom containment products for your individual application.

Folding shipping racks

Feeder rack

Coil rack

12,000 pound capacity!

CO₂ tanks

Special shipping rack

Containment rack

Easy to verify contents

Auto body parts storage

Fixed Racking and Rolling Racks

Cantilever Rack

To easily store and retrieve tubing, lumber and other long products, cantilever racks will do the job, eliminating the time wasted moving material to get the specific product that you need. Available in many heights, arm lengths and capacities.

Pallet Rack

Constructed of heavy-duty beams and uprights.

Cantilever rack

Pallet rack

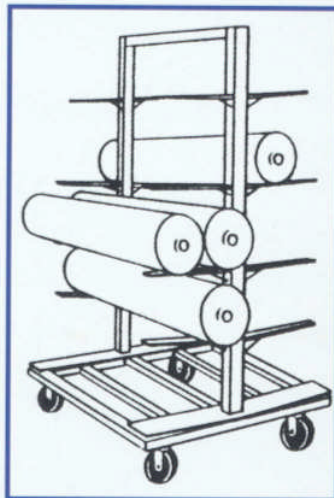

Rolling rack

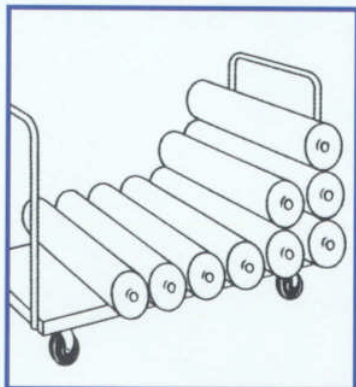

Dollies and Rolling Racks

When you need to have people move products or supplies without the aid of a forklift, our dollies and rolling racks can keep your people moving. Dollies are platforms on wheels. Rolling racks are our portable racks with casters added.

Custom rolling shelves

Rack on dolly

TIER-RACK®

Flexible Material Handling Systems

Industry Leader Since 1955

About Tier-Rack

Tier-Rack Corporation has been a leader in flexible warehouse systems for over forty-five years. The original Tier-Rack® pallet stacking frame converts regular warehouse pallets into sturdy storage racks in seconds without screws or bolts. And the Load-Nester® all-steel storage rack features light and heavy duty models of solid all-welded, knock-down or nestable designs.

Our racks are designed to handle and store even the most fragile, odd-shaped and awkward merchandise. They can be designed to transport two loads at a time. Our racks reduce handling time, stack four to six high, and they are capable of supporting thousands of pounds per unit load.

All styles of racking are engineered to meet and/or exceed the "2-to-1" safety factor established by the Rack Manufacturers Institute for portable rack design specifications.

Mission Statement

The purpose of Tier-Rack Corporation is to help businesses safely and easily store or move their product.

We provide value by selling products that meet or exceed the expectations of our customer – in performance, design, quality and durability.
